HEIA NA Equity | Bloomberg P&L Data Analytics

Complete analytical report • FY2017–FY2024 • SYNTHETIC TRAINING DATA

Stage 0 — Goal and analytical workflow

Decision-maker: CFO / investment analyst evaluating revenue quality, profitability, exposure by channel and region, and operating leverage. Python cleans and reconciles; Excel provides an auditable lookup-based model; Power BI supports filtering and communication. Presentation is analytical risk: confusing total revenue with net revenue understates margins, while treating positive excise as income overstates revenue. The expected discontinuities are pandemic disruption in FY2020 (on-trade and EBIT), inflation / cost pressure after FY2021 (cost of sales and OPEX), and Russia exit / discontinued operations in FY2022–FY2023. Excise is a duty collected on alcoholic products; net revenue excludes it and is the appropriate margin denominator.

Stage 1–2 — Source audit, cleaning and reconciliation

Source: 6 workbook sheets (income statement, revenue by segment, geography, OPEX detail, lookup tables, README), plus a CSV mirror. Eight fiscal years. Income-statement data begins at row 10 with headers in rows 7–8 and preamble above. Numeric defects include commas, padding spaces, nonbreaking spaces, parenthetical negatives, Unicode minus, percent strings, and placeholders —, NM, #N/A N/A, n.a. Missing means unavailable, not zero. The duplicated net-revenue row and repeated Premium segment row were deduplicated. The FY2020/FY2023 OPEX-detail total includes impairment, while the income statement separates it. Excise is normalized to a negative deduction. Region names and digital-channel labels are standardized. Missing dictionary codes and regional allocation assumptions are documented in the workbook quality log.

Reconciliation results: 56 of 56 checks pass (tolerance EUR 1.1mn, EPS EUR 0.02). Failed checks must be reviewed in the accompanying reconciliation CSV; differences are not silently forced to zero.

Stage 3 — Lookup-driven master model

The Excel Master P&L uses SUMIFS with a COUNTIFS guard keyed by exact line item and fiscal year against the long-form Clean Data sheet. This is a two-way lookup: change the row label or year header to retrieve another observation. Blank source values stay blank. The dictionary contains two missing codes; metadata is therefore fallback-tagged rather than represented as a complete code match. Cross-sheet formulas make later refreshes auditable.

Stage 4 — Trends and growth

Net revenue increased from EUR 21,880mn to EUR 27,640mn, a EUR 5,760mn increase and 3.39% CAGR. Attributable net income moved from EUR 1,787mn to EUR 949mn; its CAGR is -8.64%. Net revenue CAGR is the steadier headline because earnings are disrupted by impairments and below-EBIT items. Growth after FY2020 should be shown with the depressed absolute base; negative prior-year earnings make conventional growth percentages not meaningful.

FY	Net revenue	EBIT	Gross margin	Operating margin	EPS
2017	21,880	2,969	51.8%	13.6%	3.10
2018	22,470	3,039	52.1%	13.5%	3.25
2019	23,970	3,288	52.6%	13.7%	3.46
2020	19,720	684	49.9%	3.5%	-0.34
2021	21,940	2,343	51.2%	10.7%	2.13
2022	26,850	2,263	47.4%	8.4%	1.76
2023	28,210	1,201	47.9%	4.3%	-0.72
2024	27,640	2,407	49.3%	8.7%	1.69

FY2019–FY2024 revenue bridge: change EUR 3,670.0mn = volume effect EUR -1,489.4mn + residual price/mix effect EUR 5,159.4mn, using FY2019 revenue/hl for the volume effect. Price/mix is a residual and includes other factors; it is not a directly observed selling-price series.

Stage 5 — Margins and operating leverage

FY2017 gross margin 51.8% versus FY2024 49.3%; operating margin 13.6% versus 8.7%. Gross margin on gross revenue is 42.0% in FY2024, compared with 49.3% on net revenue: a 7.3pp denominator distortion. Use net revenue for comparability. FY2020 effective tax rate is 138.1% because pretax income was small; avoid interpreting it as a normalized tax burden.

Stage 6 — Segment and geography

Product FY2024: Premium EUR 11,388mn (41.2%), Mainstream EUR 13,129mn (47.5%), Low & No-Alc. EUR 1,686mn (6.1%), Beyond Beer (Cider/Seltzer) EUR 1,437mn (5.2%).

Channel FY2024: On-Trade EUR 10,410mn (37.7%), Off-Trade EUR 14,250mn (51.6%), Digital B2B (eB2B) EUR 1,820mn (6.6%), Export & Other EUR 1,160mn (4.2%).

Brand data are available through FY2022 only; the extract states that from FY2023 disclosure changes to a different presentation. FY2023–FY2024 brand values remain missing, never zero. The restated geography series uses a 60% Europe / 40% AMEE allocation of historical Central & Eastern Europe revenue. Those two regions are estimated before FY2021, not historical reported facts.

Europe: FY2019 EUR 10,987.6mn; FY2024 EUR 12,383.0mn; contribution EUR +1,395.4mn.

Americas: FY2019 EUR 6,232.0mn; FY2024 EUR 7,850.0mn; contribution EUR +1,618.0mn.

AMEE: FY2019 EUR 4,281.4mn; FY2024 EUR 3,593.0mn; contribution EUR -688.4mn.

Asia-Pacific: FY2019 EUR 2,757.0mn; FY2024 EUR 4,146.0mn; contribution EUR +1,389.0mn.

Head Office & Eliminations: FY2019 EUR -288.0mn; FY2024 EUR -332.0mn; contribution EUR -44.0mn.

Stage 7–8 — Excel charts and Power BI dashboard

The workbook includes a master P&L, ratios, growth table, segment mix, restated regions, operating metrics, reconciliation, quality log, and chart-ready indexed data. Use the companion Power BI implementation guide for model relationships, slicers, DAX measures and visuals. A native .pbix requires Power BI Desktop to create/save and is not generated by this Python workflow.

Stage 9 — Decision-ready insights

Revenue peaked in FY2023 at EUR 28,210mn. Gross margin peaked in FY2019 (52.6%) and bottomed in FY2022 (47.4%), a 5.2pp spread. EPS peaked in FY2019 (3.46) and bottomed in FY2023 (-0.72).

Largest EBIT declines: FY2020 (EUR -2,604mn) and FY2023 (EUR -1,062mn). Interpret FY2020 against pandemic-era on-trade demand and impairment; later weakness also requires examination of cost inflation and below-EBIT financing / discontinued items. These are dataset-consistent interpretations, not causal proof.

One-page CFO memo

To: Chief Financial Officer | Subject: Eight-year P&L review — synthetic HEIA NA Equity

The eight-year record shows net revenue growth of EUR 5,760mn (3.39% CAGR) but less consistent profit conversion. Operating margin moved from 13.6% in FY2017 to 8.7% in FY2024. FY2020 is a demand and impairment stress test; FY2022–FY2023 must also be read through finance, tax and discontinued operations rather than headline sales alone.

Watch next year: (1) operating margin versus FY2024 8.7% and (2) net revenue per hectolitre versus FY2024 EUR 122.1/hl. Recommendation: prioritize revenue-quality and gross-margin improvement, especially price/mix and route-to-market economics, while tracking OPEX as a share of net revenue. The recommendation is directional: the extract cannot isolate inflation, FX, pricing and portfolio effects causally.

Final reflection

The excise sign convention is particularly dangerous: failing to subtract a positive-looking duty would corrupt net revenue and every margin. The unit issue and hidden impairment likewise require reconciliation. Python checks, Excel auditability and Power BI communication together reduce the risk of a persuasive but incorrect presentation.
